## Multi-Rail RH System

Multi-Rail RH is the new generic-purpose fixturing system from OK-VISE. Multi-Rail RH is optimal when the clamping force is over 4 tons and also when the workpieces are rather big.

### FIXTURE SETS

To make selection of the components easier, the OK-VISE team has created some basic sets to enable an easy start with the Multi-Rail system.

Compared to a traditional machine vise, the Multi-Rail RH system offers the following benefits:

- Using the components of the system, even the most challenging workpiece types can be machined.
- All sides of a workpiece can be machined with two setups.
- Multiple workpieces can be clamped on the same area.
- The workpiece is safely fixtured under all circumstances.
- It is also possible to fasten very large work pieces.

GENERIC FIXTURING COMPONENTS

# MULTI-RAIL RH SYSTEM APPLICATIONS

In a modular system all the functions of a fixture are separated divided into individual modules. This means that when workpiece material, form or size changes, the modules of the fixture can be changed independently of each other. Using a well-chosen collection of basic modules – a set – a huge variety of workpieces can be clamped simply using the same modules.

We also offer installation sets for the most typical platforms like T-slot tables and grid systems.

OK-VISE low-profile clamps are the core component of our Multi-Rail system. Our low-profile clamps are available with various jaw types. In the Multi-Rail RM system, clamps of sizes D and F can be used.

The original OK-VISE low-profile clamps are known worldwide as a core component of any modern fixturing system. In the machining industry, the OK-VISE name stands for quality.

The parent company of OK-VISE OY is Kytölä Instruments. The company is known for manufacturing precision instruments.
